

INSTITUTIONAL TWO BEST PRACTICES

1. A Firefighting system

TS Rahaman has been imparting quality Maritime education for the last 114 years. They have been pioneers in maritime training and safety. As it is said that charity starts at home, we believe that unless we start the training on campus with every individual whether joining ship or not, we will not be fulfilling our endeavours to train young seafarers.

OBJECTIVES:

Keeping this focus in mind the foundation decided to train all individuals who are working on campus for firefighting.

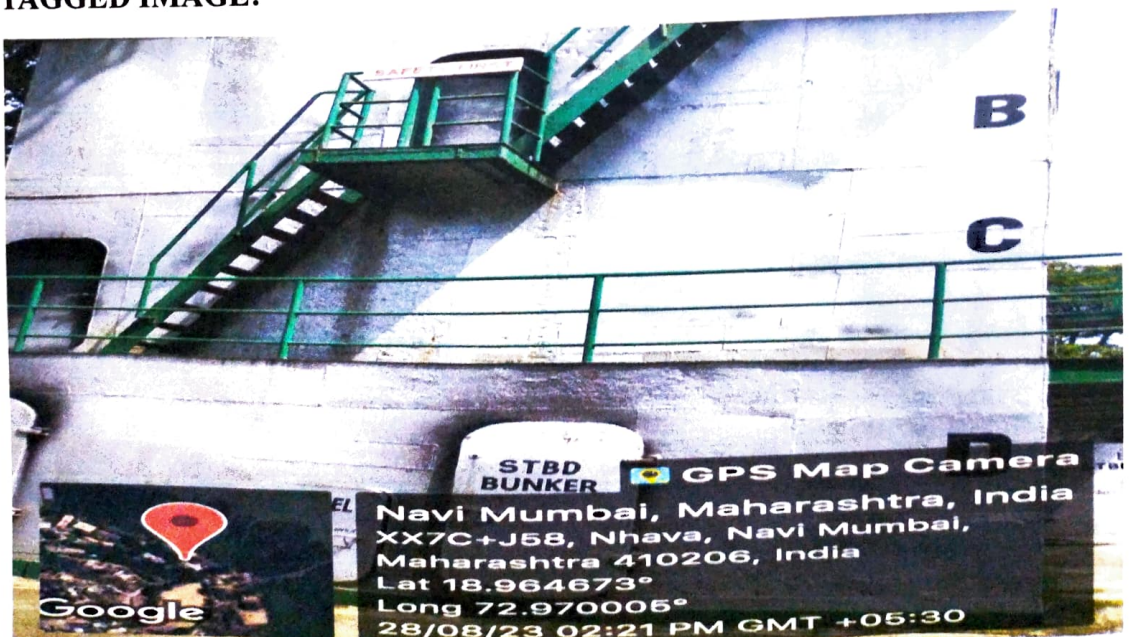

Right from Peon to principal all employees of the foundation or compulsorily given brief training in firefighting and they also participate in firefighting drill which happens every six months.

CONTEXT:

In a firefighting drill, every individual is supposed to participate and help the campus in emergency situations.

Practical demonstrations are given to every student and every faculty member on a regular basis in every academic year.

PRACTICE:

All individuals assemble at their muster station, if there is a fire alarm respective teams who have been given specific jobs to fight the fire arrive at the scene of the fire and the medical department keeps the ambulance and doctors ready in case of any medical emergency. The security guards make sure that the passages are clear for external help like the fire tender from the nearest fire station and also there is no hindrance for an ambulance to go outside to the nearest hospital.

The command centre team coordinates all the other teams to make sure that the fire is extinguished smoothly and efficiently and that evacuation is also done properly. After the fire drill is over all HODs assemble in the conference room and we discuss the efficacy of the firefighting drill.

PROBLEMS ENCOUNTERED:

Whenever the cylinder is empty or the validity expires needs to be refilled from the authorized agent which is far away from the college.

2. MUSEUM:

OBJECTIVES:

To solve problems and meet the needs and requirements of users through the creation of visually appealing and functional products, spaces, or systems.

A museum is a not-for-profit, permanent institution in the service of society that researches, collects, conserves, interprets and exhibits tangible and intangible heritage.

CONTEXT:

- Museums are community centres designed to inform and teach the public.
- The educational benefit of a museum is academic learning.
- Museums are the caretakers of history as much as they offer connections to history.
- Museums are full of stories, and it is interesting for students to hear these stories.

GEOTAGGED IMAGE:

PRACTICE:

The well-maintained Museum contains various ship models, sculptures, various informative boards, and evolutionary history.

PROBLEMS ENCOUNTERED:

Proper maintenance of ship models.
